Dear HANDY SYSTEMS support.

Thank you for contacting FxPro.

I would like to answer your questions about trading issues:

1. Which order execution method does your company employ: Market Execution or Instant Execution (Streaming)?

-> Currently we mainly provide trading accounts based on the market order method.

2. In the MT4/MT5 platform, is the slippage parameter specified in the OrderSend function actually applied?
+3. How are orders processed when there is a sudden price fluctuation? Specifically, could you explain how orders are handled when there is a significant deviation from the specified price?

-> Normally we will execute your orders at the price you place the order, but in the case of strong market price fluctuations that lead to slippage, in this case the price will be closed at the best possible price that the liquid market can provide according to the trading volume.

4. Is there any difference in the order execution method between demo accounts and live accounts?

-> Our real accounts and demo accounts have almost the same functions and trading parameters, both types of accounts have trading functions based on the Market execution method.

Please feel free to contact me if you need any further information

Thank you.

Kind Regards.

Tuan.
